

## UYT are now armed and ready

Coventry based automotive supplier UYT, have invested in the latest portable measuring technology from FARO.

Mark Geffert of UYT has stated that the FARO arm allows UYT to inspect fixtures that could not previously be measured because they would not fit on the fixed bed CMM table. Checking fixtures is key to our production quality said Mark and therefore, they deserve and require regular thorough attention.

Robot fixtures can be checked for correct positioning of location pins etc., and UYT can confirm with their customers that fixtures are as good as when they were built. The "measurement at source" technology will provide important cost saving benefits by alleviating costly down time on the production lines.

This in turn gives an all round confidence in the dimensional stability of our product.

The Faro Arm will allow greater flexibility, mobility and functionality and will transform the way UYT verifies its tooling. The FARO arm means key features can be verified with or without CAD data using Faro's CAM 2 measure software.

Currently two operators from UYT have been trained to use the equipment and it is envisaged that more will be trained in the near future.

The flexibility and ease of use of the FARO arm has greatly benefited the company and its business.

### ABOUT FARO

*FARO Technologies, Inc. (NASDAQ: FARO) designs, develops, and markets software and portable, computerized measurement devices. The Company's products allow manufacturers to perform three-dimensional inspections of parts and assemblies on the shop floor. This helps eliminate manufacturing errors, and thereby increases productivity and profitability for a variety of industries in FARO's worldwide customer base. FARO Technologies is ISO 9001 certified and Guide 25 approved. FARO: THE HIGHEST ACCURACY. THE LONGEST RANGE. THE TOTAL MEASUREMENT SOLUTION. Learn more at [www.faro.com](http://www.faro.com).*
